Description

The Reynolds Assault is an aggressive, all-carbon clincher wheelset with a 46mm deep-V rim, designed to improve the speed of your everyday cycling. It is engineered to withstand severe lateral force, meaning the Assault digs harder, drives faster and hangs tougher than any similar wheelset. Stiff and responsive in any situation, the Assault features a carbon braking surface that ensures braking is smooth and sure. And, while the Assault takes any punishment you can deliver, our proprietary Vibration Management System (VMS) helps keep the ride smooth and steady. Why put up with alloy when you can enjoy Reynolds carbon performance for about the same price?
