Description

Hexagon Pegs

One great way to measure the popularity of your parts is to see which riders use them even when they're on somebody else's team. Our Mobeus and AstroGlide cables lead the charge among must-have parts with non-SNAFU pros, and Mayweather cranks are close behind. Coming in a strong third are SNAFU Hexagon pegs. Their chromoly sleeve and fluted alloy core makes them light, and everyone likes that. There's obviously nothing special about our peg's function over similar designs, but our simple hex washer locking system and two different lengths make them versatile, and that's another plus. If you're thinking about giving up pegs, consider weaning yourself with a set of shorty Hex pegs first. If you like the way short pegs feel, take them off and grind on your axle nuts. Whatever you choose to do, do it because it feels right; not because it's what your friends did first.
