Description

Maximum attention. The CatEye Rapid 3 tail safety light includes a high power center SMD-LED and two 5mm LEDs for outstanding visibility.

Three modes allow you to customize your visibility. The rapid mode is an all out attention grabber, using all 3 LEDs in a unique pattern guaranteed to get you noticed. The flashing mode foregoes the high-power center LED to save blinding your riding buddies, while the constant mode adds a daytime safety option.

The included AA battery will run the Rapid 3 for up to 80hrs and comes with the SP-11 FlexTight™ bracket. Compatible with the all-new RM-1 Saddle Rail bracket and the clothing clip, available separately.
