Description

Your legs are your engine, and the Strada Cadence is your tachometer. This sleek CatEye cycle computer delivers the essential functions of the Strada plus pedal cadence.

The Strada Cadence boasts the largest screen and numbers in its class. With the new [ClickTec™](#) interface, you can switch among eight modes by simply pressing the bottom of the computer face. Your selected mode (cadence, average speed, etc.) displays at the bottom of the screen, while your current speed always appears at the top in huge, easy-to-read numerals. An up/down arrow tells you whether you're above or below your average speed.

The innovative [FlexTight™](#) bracket mounts quickly, securely and without tools to virtually any handlebar or stem. The new tool-free speed and cadence sensor mounts effortlessly to any standard (non-elevated) chain stay. Are you spinning or grinding? Guess no more.

Functions

- Cadence
- Current speed
- Maximum speed
- Average speed
