Description

Packed with functions but free from wires, the Strada Wireless epitomizes power and elegance.

The Strada Wireless boasts the largest screen and numbers in its class. Thanks to the new CatEye [ClickTec™](#) interface, you can switch among seven modes by simply pressing the bottom of the computer face — easy to do, even on rough terrain. Your selected mode displays at the bottom of the screen, while your current speed appears at the top in huge, easy-to-read numerals. An up/down arrow tells you how your current speed compares to your average speed.

The innovative [FlexTight™](#) bracket mounts quickly, securely and tool-free to virtually any handlebar or stem. The new tool-free wheel sensor mounts effortlessly to most road and mountain forks.

Strada Wireless: Ride fast, ride sleek, ride wireless.

The Strada Wireless is also available in Red and Pink for a limited time.
